English Version

For those taking this medication

How to take the emergency contraceptive pill

LEVONORGESTREL TABLET “FUJINAGA”

This medication is used as emergency contraception in cases where conventional contraception has failed or unprotected sexual intercourse has occurred.

How to take this medication

Levonorgestrel tablet 1.5mg "FUJINAGA" is a white tablet.
One blister strip contains 1 tablet (1 dose worth).
Take **1 tablet within 72 hours** after sexual intercourse.

● **Please take this medication within 72 hours after sexual intercourse.**
No particular time or time period within the 72 hours for taking this medication is set, however it is highly recommended that you take it as early as possible after sexual intercourse.

Things to be aware after taking this medication

- Taking this medication **does not fully prevent the risk of pregnancy**.
- As it is still possible to become pregnant even after taking this medication, please use appropriate contraceptive methods.
- After taking this medication, you may experience a **menstruation-like bleed (withdrawal bleed)**. In addition, you may also experience symptoms that usually accompany menstruation, such as **abnormal uterine bleeding, headache, nausea, fatigue or drowsiness**. If these symptoms persist, please see your doctor.
- After taking this medication, **the menstrual cycle or bleeding conditions (duration or volume) may temporarily be abnormal**.
- Sometimes it can be difficult to distinguish between an abnormal uterine bleed, or bleeding during early stages of pregnancy, with that of normal menstruation. Therefore, **please come to the hospital for a follow-up examination** as advised by your doctor regardless of whether bleeding has occurred or not.
- For those currently breast feeding, please **do not breast feed for at least 24 hours** after taking this medication as **the components of this medication may be found in breast milk**.
